ABSTRACT

Swetnam, D.A. and S.F. O'Neil. 1984. Collation of Atlantic salmon sport catch statistics, Maritime Provinces, 1980-83. Can. Data Rep. Fish. Aquat. Sci. No. 450. ix + 194 p.

The progressive decline of Canadian east-coast Atlantic salmon stocks has generated a need for more accurate and concise catch and effort information. This need has prompted the production of this report, covering the period 1980-83, which is the first in a series of four reports detailing Atlantic salmon angling data on Maritime rivers. Three subsequent reports will cover the data from 1951 to 1979.

The data used were collected by conservation and protection officers of the Department of Fisheries and Oceans.

Numbers and weights of fish angled, as well as numbers of rod-days expended, are included for kelts and bright fish, by grilse and salmon breakdowns for individual rivers, river systems, statistical districts, counties, salmon management zones, provinces, regions, NAFO divisions and the Maritimes as a whole.

Key words: Atlantic salmon (Salmo salar), sport fishing, rod-days, kelts, grilse, salmon management zones, statistical districts, Maritimes.

RÉSUMÉ

L'épuisement progressif des stocks de saumon atlantique sur la côte est du Canada a donné naissance à un besoin de renseignements concis et plus précis sur les prises et l'effort de pêche, d'où l'idée de produire le présent rapport pour les années 1980-1983. C'est le premier d'une série de quatre rapports détaillés sur la pêche au saumon atlantique dans les cours d'eau des provinces Maritimes. Les données concernant les années 1951-1979 seront fournies dans trois rapports subséquents.

Les données utilisées ont été recueillies par les agents de conservation et de protection du ministère des Pêches et Océans.

Le nombre et le poids des poissons capturés ainsi que le nombre de jours consacrés à la pêche y sont inclus pour ce qui est des charognards et des poissons brillants, de même que la répartition des grilse et des saumons pour chaque flueve, réseau fluvial, division statistique, comté, zone d'exploitation du saumon, province, région, division de l'OPNA et l'ensemble des Maritimes.

INTRODUCTION

This data report is the first to provide a monthly breakdown of Atlantic salmon sport catch and effort statistics over a number of years. Three subsequent reports will provide data for the period 1951-79. Prior to 1951, salmon sport catch data were not routinely collected. These data are intended for general use but were compiled principally to aid fisheries biologists who are involved in providing advice to managers of the Atlantic salmon resource.

The data were obtained from monthly angling reports completed by Fisheries and Oceans field personnel (Fig. 1). Although every effort was made to ensure the integrity of the data, the variety of techniques employed in its collection over the years suggests that "approximate" would best describe their accuracy as a whole. Fishery officers were occasionally transferred after only a short one- to three-year stay in a location, so may have been unfamiliar with the Atlantic salmon sport fishery on which they were reporting. The techniques employed for data collection varied, depending on the area, budgetary and manpower constraints and officer priorities. Some of the techniques used were camp and Crown Reserve angling records, word-of-mouth reports, contact with anglers and arms-length estimates based on an officer's personal knowledge of the fishery. Nevertheless, the data will approximate actual catch and effort and the trends should be indicative of fluctuations in availability of fish to the angler and in effort expended between years and rivers.

Data in this report have been carefully compared with previous summaries and any discrepancies checked with the original source. Consequently, information in the current report should be considered the most up-to-date.

The statistical portion of this report is divided into nine sections, each a separate type of breakdown or summary of angling data on the various rivers as follows: Section 1 - Individual rivers, listed alphabetically with map index number; Section 2 - "River systems," which include condensed data for six river systems; Section 3 - Statistical districts; Section 4 - Counties by province; Section 5 - Salmon Management Zones; Section 6 - Provinces; Section 7 - Scotia-Fundy Region and the Maritime Provinces portion of the Gulf Region; Section 8 - NAFO subdivisions; and Section 9 - The Maritime Provinces as a whole.

In each case, the data which are presented include: the numbers and weights of kelt and bright large salmon and grilse by month for each year; effort in rod-days; and the catch per unit of effort (CPUE), or number of fish per rod-day. A kelt is a salmon in the spent or spawned-out condition prior to its re-entry into salt water (Allan and Ritter 1977) and a bright fish is a maturing salmon that has spent at least one winter at sea.

The convention employed by Conservation and Protection Division staff for the classification of an angled fish as either a large salmon or grilse is its weight. Salmon weighing over five pounds (2.27 kg) are classed as large salmon and those five pounds and under as grilse. A rod-day is defined as one individual fishing a river for any portion of a single day.

On some rivers, both kelt and bright fish were angled during the same month, usually May. Fishery Officer catch and effort reports did not subdivide the number of rod-days devoted to catching each year-class of salmon within the month. Consequently, for the individual rivers, the total effort for that month has been reported for both kelts and bright fish. In the remaining sections, however, these rod-days were added to effort which could be assigned to only kelts or bright fish to arrive at that monthly total.

In the case where there are rivers of the same name in different counties, the county name is included in parentheses after the river name.

Presentation of the data by various geographic boundaries necessitated the establishment of some criterion for river placement. The criterion employed was the location of the river mouth on a topographical map (1:50,000 series); in some cases, the coordinates of the river mouth were obtained from the appropriate provincial gazetteer. In cases where a river was used as a boundary line or crossed one or several boundary lines, the data were incorporated into the geographical sub-division containing the mouth of the river. In the "Counties" section, however, for the Saint John and Southwest Miramichi rivers, the actual sport catch and effort which occurred within the county boundary is summarized. For the "River system" portion of the report, all rivers were included which supported a sport catch and had at least one tributary, irrespective of district or county boundaries, which also had a sport catch.

Much of the information in this report for the years 1980-83 is also available for individual rivers in the "Redbook" series published by the Freshwater and Anadromous Division, Fisheries Research Branch, Halifax. An annual summary of catch and effort without the monthly breakdown, for the years 1951-79, has been previously published (Smith 1981).
